

KOOZIES

If your blank koozies are wrinkled, don't panic!

Sometimes for shipping we have to pack the koozies really tight to get them to fit in the shipping box. If your koozies look wrinkled or “smashed” you can use your heat press or home iron and remove the wrinkles.

Your blank koozies are made from “scuba material”. Scuba material is basically a synthetic neoprene. The outside of the scuba material is made from a polyester material. This scuba material is more receptive to heat transfer vinyl than actual neoprene because some heat transfer vinyl will not stick to neoprene. You can use any of our heat transfer vinyl (t-shirt vinyl) to personalize your koozies.

When applying heat transfer vinyl, use the koozies just like you would a t-shirt or other fabric(s).

Sewn koozies: are primarily used for heat transfer (t-shirt vinyl)

Un-sewn koozies: are primarily used for embroidery machines because you will have to sew the sides of the koozies yourself. You can still use heat transfer vinyl on un-sewn koozies, but, you will need to sew the sides yourself.
